

EU-27 downward employment trend flattening out Latest Labour Market Trends – 2010Q1 data¹

In 2010Q1, the number of persons in employment² (seasonally adjusted) in the EU-27 fell for the seventh time in a row, down to 220.5 million, 0.2 % (0.5 million) fewer than in 2009Q4 (see Chart 1). However, the pace of the reduction slowed down further.

In 2010Q1, unemployment (seasonally adjusted) in the EU-27 grew once more, passing 23 million. The quarterly increase amounted to 2.2 % (0.5 million in absolute terms, matching the reduction in employment) and was the eighth rise in a row.

The EU labour force survey provides deeper insight into the latest labour market trends, as it allows breakdowns by the main characteristics of employment and unemployment.

In 2010Q1, the employment³ rate (not seasonally adjusted) of the population aged 15 to 64 years in the EU-27 fell by 0.9 percentage points (p.p.) to 63.7 % from 2009Q1.

Over the same period, the unemployment rate (not seasonally adjusted) in the EU-27 rose by 1.4 p.p. to 10.0 %. The decrease in the employment rate and the increase in the unemployment rate were higher for men (-1.5 p.p. and +1.6 p.p. respectively) than for women (-0.4 p.p. and +1.0 p.p.).

In 2010Q1, the unemployment rate of people aged 15 to 24 years in the EU-27 rose to 21.4 %, up 2.5 p.p. year-on-year. The long-term unemployment rate went up to 3.7 %, 1.0 p.p. more than one year earlier.

The activity rate of the working age population (15-64 years) in the EU-27 increased slightly to 70.9 %, up 0.1 p.p. compared with one year earlier. The share of inactive persons willing to work (i.e. those outside the labour force who would nevertheless like to work) in the total population aged 15 to 64 increased by 0.3 p.p. over the year, ending at 5.3 % in 2010Q1.

Average working hours increase for the first time since 2008Q2

The actual weekly working time in all jobs for an average person in employment in the EU-27 increased from 33.6 hours in 2009Q1 to 34.0 in 2010Q1 (not seasonally adjusted), showing the first year-on-year growth since 2008Q2. In 2010Q1, the average working time grew in eighteen EU, EFTA and candidate countries (see Chart 2). The increase exceeded 2 hours in Belgium and was between about 1 hour and 1 hour 40 minutes in Bulgaria, France, the Czech Republic, Slovakia, Italy, Estonia and Sweden, between about 25 and 45 minutes in Finland, Ireland, Croatia, Hungary, Germany, Cyprus and Austria and about 15 minutes in Malta, the Netherlands and Turkey. The average weekly working time remained nearly unchanged in Latvia, Portugal, Iceland, Spain, Romania, Denmark and Greece, while shrinking by at least 10 and up to 75 minutes in seven other countries.

The figures above include people who had a job but did not work in the reference week, e.g. because of illness, holidays, a temporary lay-off or short-time working arrangements, who are counted as employed temporarily absent from work⁴. If only the working time of persons at work during the reference week is considered, in 2010Q1 the year-on-year increase in the weekly working time was generally smaller than the value reported above for all persons in employment (i.e. including those absent from work).

More specifically, the weekly working time for people at work increased by at least 10 and up to 76 minutes in only nine countries, whereas it went down by at least 10 and up to 56 minutes in nine more and remained nearly stable in the remaining fifteen countries and for the EU-27 as a whole.

The limited rise in the working time of people at work was, to some extent, due to the new increase in the share of part-time workers. In 2010Q1, this share among those who were at work in the reference week in the EU-27 grew year-on-year by 0.6 p.p. to 18.8 %. The share of part-time workers (out of those not absent from work) increased in all but five countries.

Hence, the increase in the time actually worked by those at work in the reference week accounts for only a limited part of the growth in the overall average working time. Instead, the increase in the average working time for all people in employment was generally associated with substantial reductions in the share of people absent from work. In 2010Q1, the share in the EU-27 went down to 8.3 %, 1.1 p.p. less than one year earlier. It was the first year-on-year reduction since 2008Q3. In 2010Q1, the share diminished in all the eighteen countries where the average working time increased, except Estonia. At the opposite end of the scale, the share of those absent from work increased in all seven countries where the average working hours went down, except Lithuania and Slovenia.

Chart 2: Average weekly actual hours worked in all jobs by all people in employment and by those not absent from work in the reference week, changes between 2009Q1 and 2010Q1, by country

METHODOLOGICAL NOTES

Sources: All statistics presented in this publication are derived from the European Union Labour Force Survey (EU-LFS), except the seasonally adjusted employment series in Chart 1, where the source is national accounts (NA). The EU-LFS is a quarterly, large sample survey providing results for the population in private households in the EU, EFTA and the candidate countries (except Liechtenstein). The sampling rates achieved in 2010Q1 vary between 0.18 % and 1.67 %. The figures in this publication are not seasonally adjusted, except for Chart 1.

Symbols: Figures in brackets lack reliability due to the small sample size; colons (:) are used for unavailable or extremely unreliable data. The first quarter of 2010 is abbreviated as 2010Q1.

Country codes: The European Union (27 countries) is abbreviated as EU-27 and includes Belgium (BE), Bulgaria (BG), the Czech Republic (CZ), Denmark (DK), Germany (DE), Estonia (EE), Ireland (IE), Greece (EL), Spain (ES), France (FR), Italy (IT), Cyprus (CY), Latvia (LV), Lithuania (LT), Luxembourg (LU), Hungary (HU), Malta (MT), the Netherlands (NL), Austria (AT), Poland (PL), Portugal (PT), Romania (RO), Slovenia (SI), Slovakia (SK), Finland (FI), Sweden (SE) and the United Kingdom (UK). The euro area (16 countries) is abbreviated as EA-16 and consists of Belgium, Germany, Ireland, Greece, Spain, France, Italy, Cyprus, Luxembourg, Malta, the Netherlands, Austria, Portugal, Slovenia, Slovakia and Finland. EFTA countries are Iceland (IS), Norway (NO) and Switzerland (CH). Candidate countries are Croatia (HR), the former Yugoslav Republic of Macedonia (MK) and Turkey (TR). The abbreviation MK used for the former Yugoslav Republic of Macedonia is a provisional code which does not prejudice in any way the definitive nomenclature for this country, which will be agreed following the conclusion of negotiations currently taking place on this subject at the United Nations.

Rounding: Although percentages are rounded to the first decimal place, calculations of changes over time take into account all available decimal places. For this reason, estimates of changes may differ slightly from the variations that can be obtained from the figures presented in the tables.

Definitions: The concepts and definitions used in the survey follow the guidelines of the International Labour Organisation (ILO).

- **Employment (LFS concept)** covers persons aged 15 years and over (16 and over in Italy, Spain and the UK; 15-74 years in Denmark, Estonia, Latvia, Hungary, Romania, Finland, Sweden and Norway; 16-74 in Iceland) who, during the reference week, performed work, even for just one hour a week, for pay, profit or family gain or were not at work (**temporarily absent from work**) but had a job or business from which they were temporarily absent, for example because of illness, holidays, a temporary lay-off, flexible working time arrangements, an industrial dispute or education and training.
- **Unemployment** covers persons aged 15-74 (16-74 in Italy, Spain, the UK and Iceland) who were without work during the reference week, were currently available for work and had either been actively seeking work in the past four weeks or had already found a job to start within the next three months.
- **Long-term unemployment** covers persons unemployed for one year or more.

- **Inactives willing to work** are persons who are neither employed nor unemployed but are seeking employment or, if not seeking, would nevertheless like to work.
- **Activity rates** show the active population, i.e. the sum of the employed and the unemployed, as a percentage of the population of the same age.
- **Employment rates** show the employed as a percentage of the population of the same age.
- **Unemployment rates** show the unemployed as a percentage of the active population of the same age.

When calculating the shares of part-time employment (Tables 6 and 7), employees with temporary contracts (Tables 8 and 9) and persons whose job started within the last three months (Tables 12 and 13), non-responses to the relevant variables are excluded. The job characteristics in Tables 6 to 13 refer to the main job, unless explicitly stated otherwise.

Main conceptual differences between national accounts (NA) and EU-LFS employment: EU-LFS employment figures refer to the resident population aged 15 years or more living in private households. It excludes conscripts in military or community service. NA employment figures refer to domestic employment, with no limit on age or type of household, also including the non-resident population contributing to GDP and conscripts in military or community service. Further details can be found at: http://epp.eurostat.ec.europa.eu/portal/page/portal/national_accounts/documents/employment/LFS-ESA.PDF

Reference periods: The 2009 data for Switzerland refer to the second quarter.

Coverage: The data for France exclude overseas regions.

Aggregates: When data are unavailable for a country, the relevant aggregates are calculated from the data for the same country one year earlier.

Confidence limits: All confidence limits are calculated at a confidence level of 95 %. The country limits are derived from coefficients of variation calculated by the national statistical institutes. When a coefficient is not available, the coefficient for the last quarter available is taken. For calculating limits of aggregates, it is assumed that the EU-LFS is a stratified sample with the country as the first stratum.

Economic activity: In Tables 6, 8, 10 and 12, the breakdowns are based on the industry of the main job. The aggregation to six sectors is based on the new Rev. 2 NACE classification.

Seasonal adjustment: EU-27 seasonal adjustment for NA employment is performed indirectly, i.e. seasonally adjusted series are calculated from seasonally adjusted Member State data. These are produced directly by Member States by different methods of seasonal adjustment, following either the X11 or the TRAMO/SEATS methods (further information is available at: http://epp.eurostat.ec.europa.eu/cache/ITY_SDDS/EN/nam_q_esms.htm). EU-27 seasonal adjustment for unemployment figures is also done indirectly. Seasonal adjustment for most Member States is carried out by Eurostat using TRAMO/SEATS. Data for Germany, Italy, Finland and Sweden are seasonally adjusted by the national statistical institutes of the countries concerned.

European Statistical Data Support:

With the members of the 'European statistical system', Eurostat has set up a network of support centres in nearly all Member States and in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site:
